CHANGRUN

# Company Introduction

- About US

- Wuxi Changrun is subsidiary of Jiangsu Sunshine Forging Co., Ltd and it was founded in 1993. The company manufactures forged flanges, tube sheets, baffles plates, plates, fittings, forged rings, nozzles, reinforcing tubes, pipes and various forgings for various heat exchangers, boilers, pressure vessels, reactor and colume according to international and national standards (ASME, ASNI, DIN, GB, JB/T, SH, HG, DG, etc.) with various materials (carbon steel, alloy steel including steel used for high-temperature and low-temperature, stainless steel including duplex steel, nickel steel and etc.). The products are widely used in petroleum & chemical industry, electric industry (nuclear power, wind electricity, thermal power), light manufacturing, machinery, metallurgy, ship craft and etc.

## Products

- Tube sheets
- Flanges
- Baffle plates
- Forged rings
- Forged Nozzles
- Forged Shafts
- Forged Gears
- Fittings
- Tubes/ bars

## Materials

- Stainless Steel
- Super Duplex
- Carbon steel
- Alloy steel
- Nickle steel
- Aluminum alloy
- Cu-Ni alloy

## Workshop Equipment

- The company has equipped facilities for manufacturing. Now it has five forging machines, one of which is forging machine whose capacity reaches 3600-ton, one is numerical control ring roll whose capacity reaches 6300 mm (Diameter), one is 1.5 ton hammers and the other two are 1-ton air hammers. There are 7 gas generators used for forge heating, 16 industrial resistance furnaces for heat treatment and more than 80 metal processing equipment among which there is a numeric control Standing Lathe whose processing diameter can reach 7meters. The company has an annual production capacity of 50,000 tons of middle and high-pressure flanges and various steel forgings for boilers and pressure vessels. The maximum pressure of manufactured flanges can reach 2500Lb, the maximum diameter can reach about 8 meters and the maximum weight of unit forging can reach 100 tons. The company owns relatively perfect physical and chemical facilities including universal material test machine, impact test machine, spectrometer, Ultrasonic defect detector and other advance machines totally reach 30 sets. The company has a team of various quality assurance management staff with high qualified. There is a complete set of testing means and quality management system form raw materials to finished products to guarantee the product quality.
